

PYROGRIP GASKET GLUE

Pyrogrip Gasket Glue is absolutely great for re-installing rope for all
Wood Heaters & Stoves.

It is Australian-made and rated to withstand temperatures up to 1200°C.

How To Apply

- It is important to clean the channel well & remove any dried glue
- Wipe with some methylated spirits to remove any dust particles; allow to dry
- Place a bead of glue along the channel using the nozzle tip
- Slowly guide the rope along the channel applying pressure but ensuring not to stretch the rope as you go

NOTE: The joining of both ends should be in the middle of the hinged side

- Using a rag wipe away any excess glue that has spread outside the rope
- Allow a couple of hours to dry with the door/lid closed before firing.
