ExoDraft Powered Cowl Solutions

With custom solutions, ExoDraft powered cowls are perfect for complicated wood heater flue designs.

- Ideal for longer or more complex flue installations, or for homes with massive negative pressure issues.
- Simple to use. Turn on with remote to establish your fire and let the cowl do the rest.
- We take your flue design and heater specifications, and create a custom cowl solution for your install.

Smoke Reducing Powered Cowls

Find the Right Smoke Reduction Solution for You!

BlueChimney Draught Booster

Designed to stop smoky starts, the BlueChimney draught booster runs for 20 minutes on start up, then turns down to assist the fire.

Suits wood heaters up to 15kW.

ExoDraft Draught Booster

Tackle longer flue runs with the ExoDraft draught booster. Actively pull smoke away for quicker start up, a steadier draft, and a cleaner, healthier burn.

Suits wood heaters up to 10kW.

ExoDraft ESP-10 Particle Filter

The ESP-10 particle filter is designed to reduce smoke from wood heaters, wood stoves, and open fireplaces by 95%. This eliminates the majority of the health damaging, ultra-fine particles emitted by wood fires.

ExoDraft Powered Cowl Solutions

Ideal for longer or more complex flue installations, or for homes with massive negative pressure issues. We take your flue design and heater specifications, and create a custom cowl solution for your install.

What is a Draught Booster?

Lighting a wood fire should be easy and enjoyable, but cold, still, or windy conditions can stop your flue drawing properly. This means a hard to light fire, and smoke pouring into your home.

Draught boosters create the perfect flue draught from the moment you strike a match. This means:

- **Faster starts** - no more struggling to get your fire going.
- **Cleaner burns** - better airflow means less wasted wood and more heat.
- **Smoke-free home** - enjoy the warmth without the mess or smell of smoke indoors.
